

# 2ND REVERSE

GREATER CONTROL • MORE MANEUVERABILITY

For the 2010 model year, Allison Transmission continues our ongoing product optimization initiative with the introduction of 2nd Reverse, exclusively available on all 4700 and 4800 models. This feature offers a second “deep reverse” in addition to the standard reverse.

- Greater control and engine braking during operation on steep grades
- More maneuverability when operating in confined spaces
- Slow creep capability with high engine speeds
- 17.12 mechanical ratio with effective torque converter multiplied ratio up to 32.5:1

New 2nd Reverse provides overall better performance and enhanced applicability for a variety of applications. Available mid-year 2010 on Rugged Duty Series and Emergency Vehicle Series models.
